MASTER FINANCE PORTFOLIO

Financial Modeling | Investment Research | Transactions | Portfolio & Risk

Loyola University Chicago
Finance & Accounting | Expected May 2028

Career Focus

Investment Banking • Private Equity / Private Markets • Asset & Investment Management • Wealth Management

SEPTEMBER 2026

Portfolio Overview

A cross-functional finance portfolio designed to demonstrate the technical and analytical skills used across investment banking, private equity, investment management, wealth management, credit and risk. The projects combine valuation, integrated financial modeling, transaction analysis, portfolio construction, quantitative strategies and decision-oriented communication.

CORE TECHNICAL COVERAGE

Valuation & Modeling	FCFE / DCF, trading comps, 3-statement forecasting, Monte Carlo
Transactions & Private Markets	M&A, accretion/dilution, LBO, investment committee analysis
Public Markets & Portfolio	Equity research, momentum/factor backtests, optimization, attribution
Credit & Fixed Income	Credit scoring, commercial underwriting, expected loss, duration and spread risk

Featured Project Index

#	Project	Primary Relevance
01	JPMorgan Chase FCFE Valuation	Valuation / Equity Research
02	NVIDIA Comparable Companies	Investment Banking / Valuation
03	JPMorgan x Fifth Third Bank M&A	M&A / Banking
04	Apple Full 3-Statement Model	Financial Modeling
05	Academy Sports LBO	Private Equity
06	Portfolio Risk Dashboard	Asset / Wealth Management
07	Credit Risk Scoring Model	Credit / Risk
08	US Large-Cap Momentum Backtest	Quant / Asset Management
09	Investment Banking M&A Pitchbook	Investment Banking
10	Equity Research Stock Pitch	Public Markets
11	Portfolio Optimization / Efficient Frontier	Portfolio Management
12	Multi-Factor Investing Backtest	Quant / Asset Management
13	PE Investment Committee Case	Private Equity
14	Fixed-Income Bond Portfolio	Fixed Income

15	Commercial Credit Underwriting	Credit / Banking
16	Monte Carlo Valuation	Valuation / Risk
17	Portfolio Performance Attribution	Asset Management

JPMorgan Chase (JPM) FCFE Valuation & Equity Research

Bank-specific intrinsic valuation using free cash flow to equity rather than a standard enterprise-value DCF, reflecting the operating role of deposits and debt in a financial institution.

PROJECT OUTPUTS	KEY RESULT / FEATURE
2026E-2030E forecast	Base implied value: ~\$292.40/share
FCFE valuation	Reference price: \$345.40
Cost-of-equity / terminal-growth sensitivity	9.5% cost of equity; 3.0% terminal growth
Equity-research one-pager	2025 ROTCE: 20%; 2Q26 CET1: 14.1%

SKILLS DEMONSTRATED

Bank valuation • Forecasting • Equity research • Sensitivity analysis

30-SECOND INTERVIEW EXPLANATION

I built an FCFE valuation for JPM because a standard FCFF/WACC framework is less natural for banks. I forecast net income, estimated required equity retention to support growth, treated the residual as distributable cash flow to equity, and discounted it at the cost of equity. The base case came in below the reference price, which made sustainable premium profitability the key investment question.

NVIDIA Comparable Companies Analysis

Trading-comps analysis benchmarking NVIDIA against AMD, Broadcom, Marvell and Qualcomm across enterprise-value and equity-value multiples.

PROJECT OUTPUTS	KEY RESULT / FEATURE
Peer set and operating metrics	Reference price: \$210.96
EV/Revenue, EV/EBITDA and P/E	Peer median EV/Revenue: ~20.0x
Quartile / median analysis	Peer median EV/EBITDA: ~52.0x
Implied valuation range	Illustrates how profitability changes multiple interpretation

SKILLS DEMONSTRATED

Trading comps • Peer selection • Valuation • Investment banking Excel

30-SECOND INTERVIEW EXPLANATION

I built a comparable-companies analysis for NVIDIA and focused on why the peer set produces very different valuation conclusions across EV/Revenue, EV/EBITDA and P/E. The biggest lesson was that multiple selection has to reflect differences in margins and profitability rather than mechanically applying a peer median.

JPMorgan Chase x Fifth Third Bancorp - Hypothetical Bank M&A

Hypothetical bank merger model covering consideration, purchase accounting, synergies, EPS accretion/dilution, tangible book value and capital impact.

PROJECT OUTPUTS	KEY RESULT / FEATURE
Deal mechanics	Illustrative equity purchase price: ~\$59.8B
Purchase accounting	Year 2 EPS accretion: ~0.9%
Accretion / dilution	TBVPS dilution: ~14.5%
TBVPS and CET1 analysis	Illustrative pro forma CET1: 13.75%
Premium / cost-save sensitivity	

SKILLS DEMONSTRATED

M&A modeling • Bank accounting • Synergies • Capital analysis

30-SECOND INTERVIEW EXPLANATION

I modeled a hypothetical all-stock JPM/Fifth Third transaction. The deal was modestly EPS-accretive but materially tangible-book-value dilutive, which shows why bank M&A cannot be judged on EPS alone. I also analyzed capital, purchase accounting, credit marks and synergy assumptions.

Hypothetical educational transaction; regulatory feasibility is a major constraint and the model is not a prediction of an actual deal.

Apple Inc. Full 3-Statement Financial Model

Integrated historical and forecast income statement, balance sheet and cash flow statement with working-capital, PP&E, debt, share-count and capital-allocation schedules.

PROJECT OUTPUTS	KEY RESULT / FEATURE
2023A-2025A historicals	2025A revenue: \$416.2B
2026E-2030E integrated forecast	2030E revenue: ~\$633.6B
Working capital and PP&E schedules	2025A EPS: \$7.49
Debt / capital allocation schedule	2030E EPS: ~\$13.81
Balance-sheet and cash-flow checks	2030E FCF: ~\$210.7B

SKILLS DEMONSTRATED

3-statement modeling • Accounting linkages • Forecasting • Free cash flow

30-SECOND INTERVIEW EXPLANATION

I built an integrated Apple 3-statement model where operating assumptions flow through earnings, cash flow and the balance sheet. The project forced me to connect working capital, capex, depreciation, debt and capital returns rather than forecasting each statement independently.

Academy Sports + Outdoors - Hypothetical Sponsor LBO

Five-year sponsor buyout model emphasizing entry valuation, debt capacity, operating improvement, deleveraging and exit returns.

PROJECT OUTPUTS	KEY RESULT / FEATURE
Sources & uses	Illustrative offer price: \$67.81
Operating case	Entry EV/EBITDA: ~6.4x
Debt schedule and cash sweep	Opening leverage: 4.5x
IRR / MOIC analysis	5-year MOIC: ~2.86x
Entry-premium / exit-multiple sensitivities	5-year IRR: ~23.4%

SKILLS DEMONSTRATED

LBO modeling • Debt paydown • Returns analysis • Private equity underwriting

30-SECOND INTERVIEW EXPLANATION

I underwrote a hypothetical Academy Sports LBO with 4.5x opening leverage and a five-year hold. The base case generates a 2.86x MOIC and 23.4% IRR, with value creation coming mainly from EBITDA growth and roughly \$2.2B of debt reduction rather than aggressive multiple expansion.

Illustrative sponsor scenario for recruiting and education, not a prediction that Academy will be acquired.

Portfolio Risk Dashboard

Portfolio-level risk analytics for a diversified 10-stock US equity portfolio benchmarked against SPY.

PROJECT OUTPUTS	KEY RESULT / FEATURE
Return and volatility dashboard	Annualized return: ~12.9%
Sharpe and beta	Volatility: ~20.1%
VaR / CVaR	Beta: ~1.22
Maximum drawdown	95% monthly VaR: ~8.2%
Correlation and concentration	Maximum drawdown: ~24.4%
Holding-level risk contribution	

SKILLS DEMONSTRATED

Portfolio risk • VaR / CVaR • Correlation • Benchmarking

30-SECOND INTERVIEW EXPLANATION

I built a portfolio risk dashboard to evaluate a portfolio beyond simple return. I combined volatility, beta, Sharpe, VaR, CVaR, drawdown, concentration and holding-level risk contribution to identify where risk was coming from and whether the portfolio was adequately diversified.

Return dataset is illustrative and explicitly labeled as such; it can be replaced with verified historical total-return data.

Credit Risk Scoring Model

Transparent consumer-credit scorecard using borrower characteristics to estimate risk points, probability of default, underwriting tier and expected loss.

PROJECT OUTPUTS	KEY RESULT / FEATURE
500 synthetic borrowers	Inputs include FICO, DTI, utilization and delinquencies
Risk score and A-E tier	45% illustrative LGD
Estimated probability of default	A-E risk segmentation
Underwriting decision	No real customer or PII data
PD x EAD x LGD expected loss	
Portfolio monitoring dashboard	

SKILLS DEMONSTRATED

Credit risk • Expected loss • Underwriting • Model validation

30-SECOND INTERVIEW EXPLANATION

I built a borrower-level credit scorecard using FICO, DTI, utilization, delinquencies, employment stability and loan-to-income. I mapped the factors into risk points and PD estimates, calculated expected loss using PD times EAD times LGD, and added portfolio monitoring and simple validation tests.

For educational/recruiting use only; a production model requires independent validation, fair-lending testing, governance and compliance review.

Momentum Backtest - US Large Cap

Cross-sectional 12-1 momentum strategy that ranks a US large-cap universe, holds the top quintile, rebalances monthly and deducts turnover-based transaction costs.

PROJECT OUTPUTS	KEY RESULT / FEATURE
12-1 momentum signal	Illustrative momentum CAGR: ~10.1%
Monthly ranking and rebalance	Illustrative benchmark CAGR: ~5.2%
Equal-weight top-quintile portfolio	Illustrative excess CAGR: ~4.9%
Transaction-cost model	Monthly hit rate: ~61.9%
Benchmark, drawdown and Sharpe analytics	

SKILLS DEMONSTRATED

Backtesting • Factor investing • Portfolio construction • Performance analytics

30-SECOND INTERVIEW EXPLANATION

I built a monthly US large-cap momentum backtest using a 12-1 signal, selected the top quintile, equal-weighted the portfolio and incorporated turnover-based transaction costs. I then compared CAGR, volatility, drawdown, Sharpe and hit rate against a broad-market benchmark.

The return series is illustrative rather than realized historical performance; the workbook discusses survivorship and point-in-time constituent limitations.

Additional Portfolio Projects

These projects broaden the portfolio beyond the eight flagship models and can be selected based on the role being pursued.

Project	What It Demonstrates
Investment Banking M&A Pitchbook	16-slide transaction-style presentation covering industry, valuation, buyers, synergies, structure, accretion/dilution and risks.
Equity Research Stock Pitch	Bull/base/bear operating and valuation framework with catalysts, risks and target-price logic.
Portfolio Optimization / Efficient Frontier	10-asset allocation model illustrating expected return, volatility, max-Sharpe weighting and the efficient frontier.
Multi-Factor Investing Backtest	Comparison of momentum, value, quality and low-volatility factor strategies against a benchmark.
PE Investment Committee Case	Academy Sports IC memo covering thesis, value creation, downside case, diligence priorities and investment decision.
Fixed-Income Bond Portfolio	Duration, yield, credit-spread and interest-rate scenario analysis across Treasury, investment-grade, high-yield, municipal and TIPS exposures.
Commercial Credit Underwriting	Illustrative middle-market lending case covering leverage, interest coverage, cash flow, facility sizing and covenants.
Monte Carlo Valuation	Probability-based valuation framework varying revenue growth, margin, WACC and terminal growth across thousands of scenarios.
Portfolio Performance Attribution	Sector-level allocation and selection attribution relative to a benchmark.

How to Use This Portfolio in Recruiting

Do not send every project for every role. Use the master portfolio as the source library and lead with the projects most relevant to the position.

INVESTMENT BANKING

Apple 3-Statement Model; NVIDIA Comps; JPM/Fifth Third M&A; M&A Pitchbook; JPM FCFE Valuation

PRIVATE EQUITY / PRIVATE MARKETS

Academy Sports LBO; PE Investment Committee Case; Apple 3-Statement Model; NVIDIA Comps; M&A analysis

ASSET MANAGEMENT / HEDGE FUNDS

Equity Research Stock Pitch; JPM FCFE Valuation; Momentum Backtest; Multi-Factor Backtest; Portfolio Risk Dashboard

WEALTH / INVESTMENT MANAGEMENT

Portfolio Risk Dashboard; Portfolio Optimization; Fixed-Income Portfolio; Performance Attribution; Equity Research Stock Pitch

CREDIT / CORPORATE BANKING

Commercial Credit Underwriting; Credit Risk Scoring; Apple 3-Statement Model; Fixed-Income Portfolio; JPM bank analysis

Resume Positioning

- Built a multi-project finance portfolio spanning valuation, 3-statement modeling, M&A, LBOs, equity research, portfolio construction, quantitative backtesting, fixed income and credit risk.
- Created integrated Excel models and decision-oriented summaries, including a bank-specific FCFE valuation, public-company trading comps, a full 3-statement forecast, an LBO with debt schedule and return sensitivities, and portfolio-risk analytics.
- Applied scenario and sensitivity analysis to evaluate valuation, transaction economics, portfolio risk, credit quality and investment returns across public- and private-market case studies.

Portfolio Disclosure

This portfolio is for educational and recruiting purposes. Hypothetical transactions and simulated/illustrative datasets are labeled as such. The models are intended to demonstrate analytical process and technical finance skills, not to provide investment, lending or transaction advice.
