

NVIDIA (NVDA) - Comparable Companies Analysis

Independent Investment Banking Portfolio Project | September 2026

\$210.96 Reference Price	17.3x EV / Revenue	24.2x EV / EBITDA	26.7x P / E
------------------------------------	------------------------------	-----------------------------	-----------------------

Executive Summary

NVIDIA is benchmarked against AMD, Broadcom, Marvell Technology and Qualcomm. The analysis shows why comparable-company valuation requires judgment rather than simply applying a peer median: NVIDIA combines unusually high growth with exceptional margins, so revenue multiples are more comparable across the group than EBITDA or earnings multiples.

Peer Trading Multiples

Company	EV / Revenue	EV / EBITDA	P / E
NVIDIA	17.3x	24.2x	26.7x
AMD	20.2x	87.2x	125.9x
Broadcom	19.8x	33.7x	46.2x
Marvell	21.2x	70.3x	76.3x
Qualcomm	4.6x	16.8x	21.2x
Peer Median	20.0x	52.0x	61.2x

Implied Valuation

Method	25th %ile	Median	75th %ile
EV / Revenue	\$188.99	\$235.58	\$240.80
EV / EBITDA	\$248.66	\$436.20	\$623.67
P / E	\$316.00	\$484.33	\$701.26

Key Takeaways

- **Premium quality:** NVIDIA's FY2026 revenue grew 65% to \$215.9B, with 71.1% GAAP gross margin and \$130.4B of operating income.
- **Multiple selection matters:** NVIDIA trades near the peer median on EV / Revenue but well below the peer median on EV / EBITDA and P / E because peer profitability differs materially.
- **Valuation conclusion:** EV / Revenue is the most decision-useful framework in this peer set; applying every median mechanically would create an excessively wide and less meaningful range.
- **Interview point:** Strong comps work requires defensible peer selection, normalized metrics and a clear explanation for the selected valuation multiple.
